

LEARNING OUTCOMES FOR THE FIELD OF STUDY

(Assumed educational effects)

Faculty: Mechanical and Power Engineering

Field of study: Mechanical Engineering and Machine Building (MBM)

Level of study: II (post-graduate)

The area of study:

Field of study Mechanical Engineering and Machine Building belongs to the domain of technical sciences and is related to such majors as Energy, Environmental Engineering, Electrical Engineering, Process Engineering and Aerospace Engineering.

Concept of the post-graduate studies and their relation to the undergraduate studies

An applicant for the admission to the Master's degree in Mechanical Engineering and Machine Building must have undergraduate degree and possess competencies to continue education at post-graduate level in this field of study. The candidate should have in particular the following abilities:

- knowledge of mathematics, physics and chemistry that enable understanding of the fundamentals of mechanics, material sciences and principles of machinery construction,
- knowledge of mechanics, strength of materials and the foundations of machine construction that enable understanding and design of the basic machine elements,
- ability to use analytical methods, simulation and experiment to formulate and solve engineering problems,
- knowledge on the flows of fluids, including all thermal processes,
- knowledge of 2D and 3D CAD design,
- ability to communicate in English, document and present experimental results, document and present the outcomes of a project,
- knowledge on thermal processes such as refrigeration, cryogenics, and incineration.

The candidate who on completion of undergraduate studies or other forms of education did not obtain the above competencies, may take a second degree in Mechanical Engineering and Machine Building, only if competence deficiencies can be completed by crediting classes that are worth no more than 30 ECTS points.

The reference to the learning outcomes for post-graduate level education in the area corresponding to the domain of technical sciences

Because a person who studies towards Master's degree in Mechanical Engineering and Machine Building obtained necessary expertise to undertake them on the completion of the undergraduate studies or – in the absence of some of the required competencies – can complement insufficiencies by implementation schedule of no more than 30 ECTS credits, the description of the learning outcomes for post-graduate studies does not necessarily refer to all the learning outcomes listed in the description of qualifications of the Master's degree in the field of study corresponding to given area of technical sciences (post-graduate level description includes combined effects of education achieved at both the undergraduate and post-graduate level of education).

Description of learning outcomes for Master's degree in Mechanical Engineering and Machine Building does not relate to the learning outcomes listed in the description of qualifications for Master's degree in the field of education corresponding to the domain of technical sciences: T2A_W10.

A graduate of the post-graduate studies must have the competencies defined by below listed learning outcomes. This does not mean, however, that all of these effects have to be achieved from the implementation of post-graduate studies program; a part of it can be obtained at the undergraduate level and - to a limited extent - as a result of informal learning.
